

Aquacode™ Prevents odours & bacteria

Aquacode™ has been used for almost a year at Coop Forum Taby where staff now fully chosen to replace cleaning chemicals with Aquacode™ when they clean floors and bottle recycling machines, as this in a much more efficient manner cleans and keeps away odours that would otherwise be formed by bacteria. When cleaning they now use only cold water and Aquacode liquid. This causes an instant kill of odours in the bottle recycling areas.

Aquacode™ is manufactured by adding electrical energy to a salt water solution in a specially designed cell made of platinum and titanium for efficient energy transfer and this creates a liquid called anolyte which is strongly oxidizing and makes it extremely effective against bacteria, viruses, spores and mould. Anolyte also has an instant kill of odours.

Aquacode™ is eco-friendly, free from chemical substances and harmless to humans.

Environmental impact

Aquacode reduces environmental impact by

70 - 95%

Dosage

- ✓ Disinfection of bench space and food utensil 50-100%
- ✓ Floor cleaning 20-50%

Supplied in packaging volumes 1,5 and 25L.
